

SimpleBus Multi-Memory Report

FSM sketch and waveform snapshot from the self-checking simulation

Finite-state behavior

1 Processor interface thread

2 Memory interface thread

Addr[23:16] selects memory base;
Addr[15:0] selects byte offset;
selected target drives Ack/Data.

Representative waveform

SimpleBus waveform, NUMMEM=4

Rendered from a Questa VCD export, first 260 ns. Raw VCD/WLF dumps are intentionally not stored here.

Notes: NUMMEM defaults to 4. Addr[23:16] selects the memory window; Addr[15:0] selects the byte offset.

The checked runs also passed with NUMMEM=8. Raw VCD/WLF simulation dumps are excluded.

Generated artifacts kept here: fsm.png, waveforms.png, report.pdf.
